                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents cDNA encoding an Arabidopsis thaliana gibberellin (GA) 2-oxidase, PcGA2ox2. This enzyme is a GA 2-beta-hydroxylase that acts on C19-GAs and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not

DE NEMOURS & CO E I. HI-BRED INT INC. DU PONT (PION-)

The invention relates to an isolated polymuclectide comprising a muclectide sequence encoding a polypeptide having GTP cyclohydrchase cut activity, appearing as nuclectide sequence encoding a polypeptide having GTP cyclohydrclase [11/3,4-dihydrcxy-2-butanone-4-phosphate synthase activity, appearing as a LADM94266. Also included are a vector comprising the polymuclectide operably linked concentrate comprising the polymuclectide operably linked to at least one regulatory sequence, transforming a cell with the comprising transforming a plant cell with the polymuclectide and regenerating a plant from the transformed plant cell), producing a plant (comprising transforming a plant cell with the colymuclectide and regenerating a plant from the transformed plant cell). The polymuclectide and regenerating a plant from the transformed plant cell), the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising che plant seed in the construction of the polymorter and a seed comprising plants where containing can be used to create transgenic plants where for the polymorter in developmental stages in which they are not normally cell types or in developmental stages in which they are not normally collymorphisms (RFDP). It can also be used to probe Southern Diote containing restriction endomuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross containing restriction and progeny of a defined genetic cross containing restriction and product genome such sequence primer in continuing centuring parent and progeny of a defined genetic cross capaner primer in continuing the mutation and sequence primer in containing the polymorpac New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels. Example 3; SEQ ID NO 5; 186pp; English. 2004-088430/09 P-PSDB; ADM94206. Eragment).

```
The present sequence encodes a gibberellic acid 2-oxidase 2 protein describes which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels achievels. Gibberellic acid levels achievels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta, 3beta-hydroxylase polymuclectides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of germination, in transgenic plants and restoration of normal seed germination, in transgenic plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                   Obtaining transgenic plant useful for controlling seed germination and seedling growth comprises transgene comprising a sequence expressing altered levels of an essential hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1403 BP; 440 A; 269 C; 261 G; 433 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 45; Page 250; 267pp; English.

The invention relates to control of gibberellin (GA) levels in plants. The method involves producing transpenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, cetc., and is also useful in storage and transport of seeds to reduce premanation which may affect a gronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase 2 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AGGITGAACCACIACCGCCTIGCCCTGAGGGACTGAACCGGAATTIGGITGGG 600

The sequence that acts on C19-GAs and for which 2-beta-hydroxylation is hydroxylase that acts on C19-GAs and for which 2-beta-hydroxylation is the only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plants, ensuring that the active hormones do not accumulate in plants, ensuring that the active hormones do not accumulate in plant sensor in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant sensor in a constitutively over-expressed or otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing cordinary and increasing yields (by the diversion of assimilates from cordinary and increasing yields (by the diversion of assimilates from infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to infection, and increasing yields (by expression in floral organs), cortain and and south in seedless grapes, citrus fruits and the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and constructs of improve fruit set and growth in seedless grapes, citrus fruits and constructs of improve fruit set and growth in seedless grapes, inapprove skin texture and fruit shape in apples, increase stem central inhubarb, improve malting yields and quality in cereals increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   79 ATTCCTGTGGTCGACCTCACGCACCCCGATGCCAAGAATCTCATAGTGAACGCCTGTAGG 138

The invention relates to an isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide having GTP cyclohydrolase IN13.4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as AND34366. Also included are a vector comprising the polynucleotide operably linked to at least one regulatory sequence, transforming a cell with the comprising the recombinant DNA construct.

Dolynucleotide, a cell comprising the recombinant DNA construct, producing a plant (comprising the recombinant DNA construct, oplynucleotide operably linked to a plant comprising transforming a plant cell with the polynucleotide and regenerating a plant from the transformed plant cell), consent from GTP cyclohydrolase IN13.4-dihydroxy-2-butanone-4-phosphate comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising che recombinant DNA construct and seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising ches recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising chessen, block of thiosesterase IN13.4-dihydroxy-2-butanone-4-phosphate chessen from GTP cyclohydroxy-2-butanone-4-phosphate chessen from GTP cyclohydroxy-3-beta hydroxy-3-beta hydroxy-3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        307

or otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful many agricultural and horticultural applications such as enhancing lodging-resistance and grain yield in cereals, improving seedling callity, reducing the growth of amenity grasses, reducing shoot growth in creat and ornamental trees, improving tolerance to cold, drought and infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to induce male and/or female sterility (by expression in floral organs), prevent per-harvest sprouting, reduce shoot growth in commercial wood species. Antisense constructs of reduce shoot growth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and learn and therefore yield in sugar cane, increase stem length and therefore yield in sugar cane, increase yield and earliness in celery and rhubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             735 CCTTCTTCTTCAACGTTGGTGACTCTCTCCAGGTGATGACAAATGGGGAGGTTCAAGAGGC 794

This enzyme is a GA 2-beta-hydroxylation is thydroxylase that acts on C19-GAs and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant tissues. The nucleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed

//note="Vector: pSPORT1; Site_1: Sal1; Site_2: NotI; This cDNA library was constructed from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The CDNA fragments were directionally cloned into the Not I -Sal I restriction site of the pSPORTI vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

UKGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

set of 9,216 low redundancy clones selected from CDNA libraries from various fissues and stages of development of soybean that consists of 2,706 CDNAs from germinating cotyledons (source library Gm-c1027); 1,355 CDNAS from immature seed coats (libraries Gm-c1019 and Gm-c1023); 917 CDNAs from tissue culture derived somatic embryos (source libraries Gm-c1019); 3,275 CDNAs from germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-c1064, Gm-c1065, Gm-c1066, and Gm-c1067; and Gm-c1068); and 963 CDNAs from young leaves exposed to bacterial and fungal pathogens (source libraries Gm-c1072, Gm-c1073, and Gm-c1074). The 5' ESTS of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked to form library Gm-c1089 and the CDNA clones of the reracked Gm-r1088 library were then sequencing was funded by NSF Plant Genome project #8872565 (http://soybeangenomics.cropsci.uiuc.edu/) as part of creation of a low redundancy soybean CDNA set. The source CDNA libraries were constructed by the laboratories of Lila vodkin, University of Illinois, Randy Shoemaker, Iowa State University, and Paul Keim, Notrhern Arizona University as part of the Public EST project, thtp://lso.186.26.94/soybeanset.html. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bloinformatics, University of Minnesota, http://web.ahc.umn.edu/biodata/nsfsoy/. Reracking and 3' sequencing were conducted by services of the University of Illinois Keck Center for Computational Genomics http://web.ahc.umn.edu/biodata/nsfsoy/. Reracking and 3' sequencing were conducted by services of the University of Illinois Seck Center for Computational Genomics http://web.ahc.um.edu/biodata/nsc.um.edu/keck.htm. Note: The corresponding 5' EST from each clone in the Gurne library for each clone can also be obtained by referring to the Genome Systems clone clone in the cource library for each cl

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage:
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G. Genoscope members carried out sequencing and annotation: Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M. Want Cruaud C., Annotation is based on the Mulich Information center for Protein Sequences): 5 prime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                    CNSOABKL 1363 bp mRNA linear HTC 06-FEB-2004 Arabidopsis thaliana Full-length cDNA Complete sequence from clone GSLTPGH20ZC07 of Hormone Treated Callus of strain col-0 of Arabidopsis thaliana (thale cress).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Castelli, V., Aury, J.M., Jaillon, O., Wincker, P., Clepet, C., Menard, M., Cruaud, C., Quetler, F., Scarpelli, C., Schachter, V., Temple, G., Caboche, M., Weissenbach, J. and Salanoubat, M. Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences: A Combined Approach to Evaluate and Improve Arabidopsis Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr

- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librarises construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M. 2003 version of the Arabidopsis Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

Liength, Length.
Castelli, V., Aury, J.M., Jaillon, O., Wincker, P., Clepet, C., Menard, M., Cruaud, C., Quetier, F., Scarpelli, C., Schachter, V., Temple, G., Caboche, M., Weisenbach, J. and Salanoubat, M. Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences: A Combined Approach to Evaluate and Improve Arabidopsis Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ccreaacceracetraregraraaacegarregaceaaacegreacerregrigearr

AJ803092 Antirrhinum majus whole plant Antirrhinum majus cDNA clone 018 5 05 018, mRNA sequence.
AJ803092 Antirrhinum majus whole plant Antirrhinum majus cDNA clone AJ803092. 
EST.
                                                                                                   /note="Vector: pBluescript II SK+, Site 1: EcoRI, Site 2: XhoI; The cDNA library was constructed from floral meristematic mRNA provided by Dr. Halina Knap of Clemson University. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The
                                                                                                                                                                                                                                                                                     cDNA fragments were directionally cloned into the ECORI-XhoI restriction site of the pBluescript vector. The injacted cDNA fragments were transformed into DH10B host cells (GibcoBRI). This library was constructed in the laboratory of Dr. Randy Shoemaker."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 ATAGTGAACGCCTGTAGGGACTTCGGCTTCTTCAAGCTTGTGAACCATGGTGTTCCATTG 180

Direct Submissions.

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jailnon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M. WRW INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Mulich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

/done_libe_Late Blight-challenged Tubers"
//note="Vector: pBluescript II SK(+) KR; Site 1: ECORI;
Site_2: Khoi; supplier: Pathogen-challenge series Tubers
Site_2: Khoi; supplier: Pathogen-challenge series Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were inocubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection. All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."

Flinn, B., Rothwell, C., Sardana, R., Griffiths, R., Lague, M., De Koeyer, D., Audy, P., Goyer, C., Li, X.-Q., Wang-Pruski, G. and Regan, S. Unpublished (2005)
                                                                                                                                                                                                                                                                    ö
                     RNA was extracted from whole root systems. CNNA was prepared from polyA+ enriched RNA. The CDNA was directionally ligated into Uni-zap KR vector from Stratagene and packaged using Gigapack Gold packaging extracts. Plasmids containing cDNA inserts were mass-excised from phage stocks using Exhssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, Evry, France). Note: EST may be of

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 13,
